In which frequency range do HOFA acoustic modules work?

Acoustic effect · https://hofa-akustik.de/en/faq/acoustic-effect/in-which-frequency-range-do-hofa-acoustic-modules-work/

Our basstraps mainly take effect in the range between 60 and 1000 Hz. An increased absorption of frequencies below 60 Hz can be achieved by using several basstraps. The absorbers take effect between 250 Hz and 20 kHz, the curtains up from 500 Hz. HOFA Diffusors work in the mid range between 700 Hz and 2.2 kHz.
